Dietary Supplement Glossary:

Vitamin A is necessary for proper eye function, healthy skin and coat, and good muscle strength. It also plays a role in sound skeletal structure and nerve function.

Vitamin B Complex has eleven components that contribute to blood building and circulation; heart function; good appetite and digestion; a healthy nervous system; efficient brain function; good skin and coat condition; muscle tone; synthesis of enzymes and adrenal hormones; proper eye function; nutrient metabolism; and a strong immune system.

Vitamin C is vital to collagen production and to the maintenance of a healthy immune system. It is part of the synthesis of a neurotransmitter that is critical to brain function and temperament. It is also important to bone growth and mineralization.

Vitamin D helps to regulate calcium and phosphorous levels in the bloodstream. It is vital to bone formation, and nerve and muscle control.

Vitamin E participates in the formation of cell membranes and cell respiration. It helps with the metabolism of fats, and it protects various hormones against oxidation.

Vitamin K is essential for normal blood functions. In an injury, it is vital to the blood's ability to clot.

Coenzyme Q10 is a powerful antioxidant that is critical to energy production in every cell. It aids circulation, stimulates the immune system and increases tissue oxygenation.

Calcium is vital to the formation of strong bones and teeth. It is important in maintaining a regular heartbeat, in proper muscle contraction, and in the transmission of nerve impulses. It maintains cell permeability, and keeps the skin healthy.

Copper is involved in the formation of collagen, bone and connective tissue, the absorption of iron, the development of red blood cells and the development of pigment in the coat.

Lutein is an important antioxidant that maintains the health of the eyes and skin.

Cobalt is a component of vitamin B12. This trace mineral helps the synthesis of hemoglobin and the absorption of iron from food.

Selenium is a vital antioxidant, especially when combined with vitamin E. Together they aid in the production of antibodies and help maintain a healthy heart and liver. This trace element is needed for pancreatic function and tissue elasticity.

Glucosamine is an amino acid sugar found in high concentrations in joint structures. Studies have proven that it actually builds joint cartilage. It enhances the body's ability to manufacture collagen and it contributes to the synovial fluid that lubricates joints.

MSM (Methylsulfonylmethane) is an organic form of sulfur, a mineral that is necessary for the production of proteins in the body. Sulfur is important for the formation of hair, muscles, skin, bones, teeth, cartilage, and the hormone insulin.

Aloe Vera is a soothing detoxifier that contains vitamins, minerals, amino acids, enzymes and anti-microbial properties, all of which contribute to the health and proper function of the digestive tract.

Seaweeds are a valuable food source of amino acids, minerals and vitamins A, C, and some of the B complex.

Enzymes include protease for the digestion of proteins, lipase for the digestion of fats, and amylase for the digestion of starches.

Iodine, needed in trace amounts, helps to metabolize excess fat, and is important for physical and mental development. It is vital to the health of the thyroid gland.

Chromium maintains stable blood sugar levels through proper insulin utilization. It is also vital to the synthesis of cholesterol, fats and proteins.

Iron is important to the production of hemoglobin and the oxygenation of red blood cells. It is essential to many enzymes, to energy production and for a healthy immune system.

Magnesium is necessary for the absorption and proper use of certain vitamins and minerals. It is needed for good bone growth, production of protein, and the functioning of many enzymes.

Manganese is an essential trace element that enhances the effectiveness of glucosamine. It is responsible for the activation of a number of enzymes that are utilized in the formation of healthy cartilage and bone. It is essential for a healthy immune system.

Chloride is needed to keep the proper balance of body fluids. It is an essential part of digestive juices.

Silicon is necessary for the formation of collagen for bones and connective tissue; for healthy skin and coat; and to maintain flexible arteries and cardiovascular health.

Molybdenum is a trace mineral that is required for nitrogen metabolism. It promotes normal cell function, supports bone growth, strengthens teeth, and activates certain enzymes.

Phosphorus is needed for blood clotting, bone and tooth formation, cell growth, contraction of the heart muscle, and kidney function. It assists the body in the utilization of vitamins.

Potassium is important for a healthy nervous system and a regular heart rhythm. It works with sodium to control the body's water balance. It also regulates the transfer of nutrients through cell membranes.

Sodium is needed for maintaining proper water balance and blood pH. It is also needed for stomach, nerve and muscle function.

Fatty Acids are important for healthy skin and a lustrous coat. They also lessen the effects of inflammatory substances and retard the development of yeast infections.

The Proprietary Blend offers a broad spectrum of phytonutrients that strengthen and protect living tissue; strengthen blood vessels; improve skin; promote eye health; and act as an antibiotic against a wide variety of pathogens and parasitic infections
